EDUCATION

B.Tech in Information Technology

CGPA - 9.23/10

K.J Somaiya Institute of Technology, Mumbai, India

EXPERIENCE

JPMorgan Chase

April. 2025 - Present

Software Engineer II

Java, Spring, Kafka, AI, Vector DB, RAG React, typescript

- **Own and maintain two production Java/Spring Boot microservices** on Java 17+: a **DMN rules engine service**, and a **Kafka-based migration service** that moves Oracle DB records to Kafka topics and consumes them to publish to **AWS S3** and JPMC's internal Mercury S3 storage.
- **Designed and deployed a scalable Java/Spring Boot microservice** to migrate data from **Oracle DB to Kafka topics** across three domains, **handling millions of records efficiently**.
- **Used Control-M scheduling** to automate and time the batch runs throughout the day, ensuring smooth and balanced data publishing.
- Built a **REST-integrated Java microservice with multiple Kafka consumers** to process messages and publish JSON records to **AWS S3**, applying object-oriented design principles for maintainability.
- **Migrated 2M+ records** from **Oracle DB to S3** as part of the firm's move towards a data product architecture.
- **Implemented a retry/resiliency pattern** in the microservice to handle Kafka message failures, **improving system reliability and data consistency**, a design pattern applied to strengthen fault tolerance across the pipeline.
- **Delivered the entire Kafka-based migration pipeline** (from producer to consumer) within six months, laying the ground-work for future data integrations.
- **Applied AI-assisted development to build a RAG-based agent** integrating a **vector knowledge base** into **GitHub Copilot**, delivering Stack Overflow-like retrieval inside the dev environment and **increasing productivity 30%**.
- Built AI skills (**Confluence, Internal Documentation Portal, and others**) enabling **GitHub Copilot to retrieve and apply JPMC's internal technical documentation in real time**, reducing developer **research time by 70%**.
- **Architected an AI-driven document ingestion framework** for JPMC's KYC platform, using AI-based extraction and digitization to streamline onboarding across **10+ document types**.
- Earned **Star Performer award on four occasions** for **AI initiatives, including Copilot skills, custom agents, and the Gossip Agent** — a Stack Overflow-style tool embedded in GitHub Copilot.

Institutional Shareholder Services

Jul. 2022 - April 2025

Software Engineer

Java, Spring Boot, Micronaut, React, Typescript, Docker, SQL server

- **Led design and development of a scalable, API-first microservices architecture** (Java/Spring, React) for the Simfund UI revamp, resulting in a **20% increase in user engagement**.
- Designed and implemented a **custom annotation-based exception handling library in Java/Spring**, achieving a **18% code reduction** across company-wide Java projects.
- **Built a Java/Spring report rendering service** parsing FTL files into JSON, enabling **50k+ weekly report downloads**.
- **Facilitated a Redux workshop for 14+ engineers** and partnered across engineering and product teams on the Simfund revamp, strengthening cross-team communication and code maintainability.
- Implemented **Docker containerization** in a microservices environment, reducing deployment time by **60%**.
- Implemented **automation for CI/CD pipelines**, enhancing deployment **efficiency by 30%**.
- **Optimized the GitLab CI pipeline** by splitting and parallelizing build jobs, resulting in a **60% improvement in build efficiency**.

SKILLS

Artificial Intelligence	RAGs Vector datastore Github Copilot AI Skills Custom Agents AI-Assisted Development
Programming Languages	Java 17+ Typescript Javascript Python C++
Frameworks and Libraries	React NextJs JUnit Mockito Jest Cypress Puppeteer GatsbyJs
Cloud and Devops	Gitlab CI/CD Docker Teamcity Octopus Deploy AWS
Databases	MySQL SQL Server MongoDB
Security	Certificate-based Authentication Kerberos
Technologies	REST Gradle Maven Git Jira Agile
